                                                                                                                                                                                                                                                                            This is the predicted amino acid sequence of a novel human secreted protein, g21 1, as deduced from an isolated adult blood cDNA clone (see AAZ19894). The invention provides new human secreted proteins (see AAZ19893-38) and polynucleotides (see AAZ19893-901) isolated from foetal cell, adult blood, adult brain and foetal kidney cDNA libraries. They are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data are given. Suggested activities include nutritional, cytokine, tissue growth, cell proliferation and differentiation, immunostimulant (e.g. as vaccine), immunosuppressive, haematopoiesis regulating, activin or inhibin, chemotactic or antiinflammatory, cadherin or tumour invasion suppressor, and tumour inhibit.

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

EMBO J. 20:2273-2285(2001).
-!- FUNCTION: Acts at E2F-responsive promoters to integrate signal provided by PHD- and/or bromodomain-containing transcription factors (By similarity).
-!- SIMILARITY: Contains 1 SERTA domain.
